

Measuring Existing Post Padding for Graphic Wraps

◀ How to Measure Existing Padding for Graphic Wraps

Determine the size of the wrap by measuring the circumference (distance around the outside) of the pad. Using a piece of string, wrap it around the existing PAD and measure the STRING.

DO NOT measure the pole/post or the diameter. Sports Venue Padding engineers will determine the correct size of the wrap for your order based on the circumference.

Circumference: _____

Height of the pad: _____

The standard height of a post pad is 6-feet, but Sports Venue Padding manufactures pads at any height, width, or shape for different activities. Let us know if you need any help.
